∅ Pothos (Epipremnum aureum)

Water

Medium

Light

Low

Difficulty

Beginner

Care: Water when top inch of soil feels dry. Tolerates low light conditions but grows faster in bright indirect light. Perfect for hanging baskets or small pots, and can trail along desk surfaces. Prune occasionally to maintain desired size. No need for frequent fertilizing - once every 2-3 months during growing season is sufficient.

∅ Strelitzia reginae (Bird of Paradise)

Water

Medium

Light

High

Difficulty

Expert

Care: Place in bright indirect light with some direct morning sun. Water when top 2 inches of soil feels dry, reduce watering in winter. Maintain high humidity through misting and requires well-draining soil mix. Feed monthly during growing season. Protect from cold drafts and temperatures below 50°F. Regular cleaning of leaves and occasional pruning of dead foliage needed.
